It is astonishing to me that people are investing billions of dollars into a useless project that WILL destroy ecosystems and release immense carbon emissions to our air. Not only that, people in towns close by to this center will struggle. Water and air quality will degrade, leaving habitants upset and in need of new ways to live a comfortable life. No one should have to adjust their lifestyle for a data center. I'm appalled that I live in a world that cares more about money and profit than the world itself. Killing the earth affects everyone including the people in charge of project Jupiter. Think about the land you are stealing, and for what. Money and AI will never be more valuable than real human lives, the earth we live off of, or the animals that inhabit it. There is already so much happening on our planet causing its destruction, we don't need a useless data center on top of it all. Please rethink this project, and put your money and efforts into something that actually matters and can help our planet heal.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
