I am a resident of Albuquerque New Mexico and I don't want any ai data centers built here. I am concerned with the matter of water shortage, water and air pollutants, and damage to local ecosystems. Project Jupiter would be detrimental to our health, our ecosystem, and our climate as a whole. We are already at a lack of water but this project would take more water than our climate can supply, this would be government-sponsored environmental racism. People living here would not have access to clean water if the data center is built. Our climate crisis would be accelerated by the implementation of more and more data centers and have global effects. I ask that project Jupiter be denied.
