

Rebecca Rodriguez

I strongly oppose Project Jupiter. I have lived in New Mexico my whole life, and while our state has been in droughts and air pollution, this data center will only make it worse. This will affect our environment, our families, businesses, and rivers. No matter how they word it, the greenhouse gases it would throw into our air, the water it will take from us which we don't have, it is not for us or our communities. I urge you to please look at other states in which data centers have been built and how it has affected them. That is how New Mexico will be if Project Jupiter gets built and you let it move forward with this permit.

I would like to request the department to reject the permit, if the permit is not denied, I also would like to request that a public hearing near Santa Teresa to have their voices heard once more.
