Hello, I am not a resident of New Mexico, but I am deeply concerned about the health of New Mexicans because of this project. AI data centers are not good for the environment and hurt not just the environment but also the people living there. What I have seen with the data centers is that they are noisy, take up a lot of water, and harm the environment in the areas. From what I have heard this data center is going to be very large. From what I have also seen is that data centers are very loud, which can harm younger children who are still developing. The average sound of a AI data center is 75 to 85 dBA from the research I have done. The average sound for children's hearing to be permanently damaged during development is an 85. This will not help the children in the area grow or improve, it will only improve the AI. Please don't let them build this.
