I am a resident of this planet, i have family not far from the site of project jupiter. I cannot understand why something like this is necessary, why you are sacrificing the health, the lives, the survival of future generations for 'technological advancement'. It is abhorrent and To add 10 million tons of carbon dioxide pollution and a vague estimate of toxic emissions to our active and long-time nonattainment zone would be nothing short of blatant environmental suicide. It is almost as if you wish for Earth to be completely destroyed, there is no justification for this terrible act, it is unacceptable to invite a new source of hyper-scale air pollution into our communities. The carbon dioxide pollution alone will heat our atmosphere at a much faster pace and promote the formation of even more ground-level ozone. The drinking water it will use will mean that communities water supplies will become nonexistent or toxic as we have seen with smaller AI data centres around the country, why sacrifice us to make tech-billionaires even richer? . Building an even bigger data centre as proposed in Project Jupiter will no doubt catapult not only our nation but the rest of the world further into environmental catastrophe. Deny the air quality permit, approving would be government sanctioned environmental racism. Our families health and safety should be worth more than the profits of tech companies like Open AI and Oracle. If further deliberation is required, a public hearing in person with virtual components is required in New Mexico. I will not stand by and allow the majority to be sacrificed for the sake of the minorities wish to be richer.
