

Alex boba

I am writing to express my strong opposition to Project Jupiter. The proposed AI data center poses a severe threat to both the environment and the local community in New Mexico. The estimated annual release of 10 million tons of CO₂ is unacceptable and directly contradicts efforts to combat climate change. Furthermore, the immense water consumption—millions of gallons annually—is particularly alarming given New Mexico's arid climate and existing water scarcity issues. This project would place an unsustainable burden on a region already struggling with drought, jeopardizing the community's access to vital drinking water and potentially devastating local ecosystems. We must prioritize the well-being of our planet and its inhabitants over projects with such profound negative impacts.

I strongly do not want this AI data centre and so does no one else, we are not ruining our planet just so already super rich billionaires can just get richer.
