

Toni Purley

I'm strongly opposed to this places being built anywhere, but especially our Beautiful State. How can you possibly think this project is going to help our Community. We live in a desert where our already dwindling water resources are at dangerously critical stage, so any water found should be going to the people, animals, & overall environment. No good can come out of this, a few jobs does not enough make up for the destruction of our resources & the people, animals, plants who live here. Our State is precious the land, the people, the animals, which will all eventually be destroyed in the long run by something that is inorganic & full of lies about how it is supposed to help us. This whole thing is scary & hopefully will not be allowed because we all will pay in the long run & not in a good way.
