

N/A N/A

We've lived without AI before we can live without it now, it limits our air and water supply and is only going to increase other problematic sources for horrible people, people over profit! Ai is not our last hope, humanity is. Protect the people, and protect our planet. This planet is all we have and if we don't have our air protected and water supply protected then humanity can't survive. Can't exist. Yes there is benefits to this but more important there's more issues to it. This would take so much away from our society and our nature. This is not a need, this isn't something that must happen. This isn't our last hope.
