

Brian Moffat

I am not writing a prewritten support. But I do support the project. As an electrician I see the need is there for power and this is going to be the future. Project Jupiter uses what I feel is the best, in terms of least impactful to the environment, power generation. You dont have problems with solar or wind farms with the wildlife, and it takes up a relatively small foot print for ground wildlife. This project has a net benefit to the people while still taking our wildlife into account. We all need to figure out a way to live on this planet together and I believe this project helps us walk the line between both extremes of the arguments for each side.
