

## Toni Roybal

I am writing this to comment in disagreement and objection to building a facility that will contribute to major air pollution in New Mexico that is more than three of our major cities combined and uses up more water than the community members already don't have access to. More and more of our communities are having non-stable and non-consistent access to clean water and this project will take away water that community members need and rely on. It will pollute our already dire air quality and make it harder for our communities to breathe, and will effect the most susceptible and at-risk important peoples of our communities, the elderly, the young and the immuno-comprimised. This facility will put the health and safety of New Mexicans on stanby. We as members and citizens of this state have a responsibility to protect the ones who live in our communities and building these facilities will do the exact opposite. I do not approve of this facility that will do more harm than good. As well as in in turn have detrimental and irreversible effects on the residents and lands of New Mexico.

Thank you for your time.
