Please do not continue with this project. It is very bad for the climate that you "want to save" but releasing carbon dioxide will just make the air quality for the people and CHILDREN living in New Mexico and atmosphere even worse. This planet can't take more of this soon and we only have 3 more years to save it, knowing the individual industry it will probably take you 3 years to build and then it's too late to even do something. AI is so bad for this planet and humanity, we CAN live without it and have for hundreds of years. You are blind to not see the problem in this. Future generations won't live if you do this. I will continue to make my voice heard and speak up because you big people won't do anything and your pathetic "solutions" only makes it worse. There are other ways to get messages to the world than to use AI, you're just lazy and don't want to work 1 month extra to ACTUALLY do something for once. And don't just sit there saying "we don't have time" "there's no money" but you're just shortening it by using AI instead of hundreds of capable minds out there. Also if you THINK for yourself you would realize that the money you are putting in to build this can be used to save the climate in other ways. Then you do have millions of dollars. It is HIGHLY toxic for the planet, animals, humans. EVEN YOU. Yes it affects you too, crazy isn't it. You don't get away from this because you're in the building. The amount of water per day is absolutely insane and not okay at all. All this massive amount of CO₂ will make the oceans more sour, heat up and kill habitats and ecosystems most of marine animals live in, make your water source worse and we won't have any water to drink because it's so horrible quality. Just THINK for once in your life. You are killing yourself by doing this.
