

Samuel Foley

My name is Sam Foley and I am a New Mexico resident who wishes to urge the NMED to reject Yucca Growth Infrastructure's air quality permit application. The fuel cell grid the applicants wish to install are concerning for not just citizens of the local area, but also the state of New Mexico at large. The air quality issues from the fuel cells such a site would have would severely degrade the air quality of the surrounding area, putting communities at risk of illness and various respiratory conditions. This is to not even mention the use of water a project like this would need in an area already suffering from a megadrought like New Mexico. I urge Dona Ana County to REJECT project Jupiter and focus its resources towards projects that will truly benefit the county and its citizens rather than only a handful of wealthy benefactors of this project.
