

## Zachary Angell

I would like to see this air quality permit for Oracle/OpenAI rejected by the Air Quality Bureau. This project, if given permission will affect the lives of all New Mexicans adversely for decades to come. The air pollution will spread beyond the immediate area and will affect not only people but flora and fauna in the immediate and surrounding areas. Not to mention the water usage that a facility like this will place on the water table for our state which is already a desert. The Rio Grande is already running dry so early in the year from the metro areas south and we do not need more draw on the aquifers anywhere in the state. We all love this state and would not like to see it ravaged so that a billionaire and his AI venture can provide pennies to remove necessary natural resources.
