Please don't continue project Jupiter. People rely on their governments to make the right decisions for them and to keep their air and water dry. You breaking that trust only leads to one direction, tragedy. River beds are already drying up and all you can think about is money and how easy it will be to have a robot do your work. You're creating your own downfall, without people having jobs and AI taking over the economy will eventually crash. This doesn't just affect the average person either, billions of animals land and sea who have no control on whether a rich human decides to build a giant data center, will all suffer. Then what will we eat? The people building these data centres will feel the same affects we all do. Please don't build this data center and do what's right. Put that money towards feeding hungry people, or wildlife conservation, this is "Our Planet" we don't have a plan B.
