

Madeline Drake

Project Jupiter is a deplorable disservice to the community. With local elementary schools and daycares within five miles of this proposed data center, the children—whom represent our future—will face the threats of toxic waste, noise pollution, air pollution, and water pollution. We can live without artificial intelligence; we cannot live without clean water and air. A project on this scale has not even been adequately tested. By following through with Project Jupiter, you are sacrificing the health of the American people in exchange for an experimental climate killer. You can't eat the money you earn when our planet can no longer harbor our food. Wealth won't protect you from the depletion of our only sources of life. Stop Project Jupiter.
