

Holly Paz

This proposed data center, and all accompanying infrastructure, should not in any way be permitted here in southern NM. Apart from the noise pollution, extreme energy use (for which WE will pay the cost) and very few actual long-term jobs offered to NM residents, the water costs alone are prohibitive to a state that already has to cope with drought and is quite literally A DESERT. As a taxpayer and lifelong resident of NM, I completely and firmly oppose this permit, and the data center. The brazen lack of regard for our people and our natural environment inherent in this proposal is disgusting.
