

Shawn Marquez

This permit needs to be denied due to the massive environmental impact this proposed data center will have. The amount of pollution this data center alone will cause is greater than that of Albuquerque and Las Cruces combined, in an area already assaulted by pollution from neighboring cities. Not to mention studies showing that the data center will increase temperatures in a 10km radius by up to 16 degrees Fahrenheit; Southern New Mexico already sees temperatures in the 110s, and approving permits for a structure that will cause temperatures in the area to increase to up to 130 degrees is cruel and unusual.
