

Camryn Walker

Project Jupiter is a completely unnecessary addition to our environment. Generative A.I is and will always be useless and only provides a lazy way in a world that claims to value hard work. The location in which this data center is to be built is already under federal recognition a nonattainment zone. Bloom Energy has a voluminous history of illegally dumping damaging waste. All these things should give reason to deny the air quality permit. Greed is one thing, but if we keep damaging the planet especially to this extent then all money these people think will be earned will mean absolutely nothing. The earth may be close to climate change beyond restoration but that does not mean we need to speed up the process. I urge you to deny this permit, allowing this to happen means the suffering of an already damaged community, as well as the earth itself. No good will come from this.
