

Paulina Kopicic

No matter how you frame it, there is no safe,eco-friendly way. You're trying to put money in billionaires's pockets while we suffer. There is no reason to do this we don't need this, we have loved ears without AI we can do it now without damaging and destroying our planet water and air that we need to survive. The climate is only getting worse and this is not helping. If we want any help for the future generation including ours this must stop. You're ruining the home of so many species that have nowhere to go and if they go extinct we suffer because they mess up whole ecosystems and they are very delicate. If you do this it will slim our chance of a better future, of a future. Think wisely about your actions because the next generation of kids may not be alive for much longer. You're killing us, this must stop!
