

Madeline Rappaport-Blazejewska

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably. The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste. If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually. Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution. For years, Doña Ana County has been called a 'non-attainment' zone—this means our air quality does not meet federal government rules. A fuel cell plant of this size has NEVER been constructed before. Project Jupiter's power plant would be 1,000 times larger than the biggest fuel cell plant Bloom Energy has ever built.

This fuel cell gas plant will release toxic chemical pollutants and 10 million tons of carbon dioxide into our air (see tables below)

Project Jupiter will produce more air pollution than the two consumer electrical grids that power NM families and businesses.

Developers did not propose pollution controls

They estimated the plant's pollution based on tests from a very small unit (only 65 kW) but the power plant they want to build is 37,000 times bigger.
