

Lorenzo De La O

This project completely undermines our entire community in Albuquerque and around like los ranchos for example. A lot of these family depend on the little water we have as is and it's going to be taken away from us for some irrelevant companies that aren't even located in the state they want to build in. The MILLIONS of co2 that will be released into the air from this fuel cell would completely destroy all of our agriculture and harm our people that have been living here for generations. It is in no way acceptable in any shape or form to allow this to further put our local areas and state at such a high risk for no gain in any way to the state. Money can not be such a blinding goal that these ceos and grubby money hungry bigots to see what irreversible damage it can cause to our home. Growing up I had to watch the families and communities around me struggle for the little water our state has and in the past few months I have never seen the Rio grande as dry as it is now in my entire life. If this data center is built it will cripple us and destroy our ways of life and this company won't suffer any repercussions for it. WE need to be angry! WE need to speak out on this as a community! WE need to stop this!
