

Rose Daish

Even though I do not live in the area this will directly affect with droughts and noise pollution, everyone on this earth will be affected when it comes to the rapid heating of the earth, and extreme changes in weather impacting wildlife and human settlements all of the world. As someone that lives in New Zealand, we see what changes like what this would cause in atmosphere can do to smaller at risk pacific countries. Even though these countries are incredibly far away from the data center, we coexist in one large ecosystem that relies on each other to make sure everything around us runs smoothly, when something changes so severely, it shifts everything and causes all the systems to collapse. Building something like this would also completely destroy native wildlife and their environments in New Mexico, also putting the residents livelihoods at risk. To make sure that this data centers creation is given the proper consideration, the public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably. In addition, the air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste, if the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
