Please please PLEASE don't allow for this data center to be built. The many data centers that the world has have clearly shown how damaging they are, just imagine what kind of damage a mega data center would do. Even worse, the air quality where the construction site is is degraded enough already. Why ruin the beauty of nature we were blessed with just for billionaires to ruin it? Do you want us as a society to suffer? Not to mention, \$165 BILLION to make this data center a reality? Mind you there's so many other better and more humane ways to spend all that money, like ending world hunger. The list goes on and on. Not only that, but there's so many more ethics to consider with the use of A.I. but in short, it largely limits a lot of creative flow through people. The public, both living in and out of the community, should be given an additional 60 days to review and comment on the air quality permit so community members can participate and have their voices heard. Additionally, the air quality permit application should be denied considering Bloom Energy's history of illegally dumping hazardous waste. If the permit is not denied, a public hearing needs to be held, in both English and Spanish, with an option to participate virtually. Approving this permit would be government backed environmental racism as residents of Doña Ana County are already very negatively impacted by environmental pollution. Once again PLEASE do not let this data center happen.
