I am a citizen in Arizona and I believe that we should not be building data centers here, or anywhere in the United States. We are already running out of water and have poor air quality. Data centers not only use excessive amounts of water, but the noise pollution it brings is not OK. Doña Ana County's air quality does not meet the federal government's rules, how will a new data center improve the quality of the air for the county's citizens? Approving this permit would be government-sponsored racism, and if the permit isn't denied, a public hearing needs to be held in both English and Spanish.
