

Maria Cruz

It's disgusting that commissioners are selling out the public for their own gains! We don't need ai or data centers! We are under a drought as it is and to give private entities more of our valuable resources for their stupid centers is absolutely horrendous. They make promises and promises but they don't intent to keep them. More jobs? How if data centers don't need human workers! They lied to people already and now we're supposed to believe them when they say it's not dangerous? They can't prove anything good will come from this except lining their pockets and environmental impacts already say it's bad for people, not just with water usage. But pollution, quality of life and tax breaks they want to built this crab. We don't need a data centers!
