This generation, the next generation and all future generations deserve to see the trees and hear the birds and feel the sun on their face. AI is a stain on this world and I get that it has many useful features relevant to many fields, but that doesn't change the fact that AI is contributing to the global climate change issue. Millions of people suffer water scarcity everyday but these useless buildings filled with machines use up tons and tons that can be given to the people. These data centres take up massive plots of land that can be used for better infrastructure or farmland that can benefit the people. These data centres are ecological deadzones with miles and miles of concrete and asphalt that nothing can survive. Why ruin a whole generation's chances of seeing the beauty of planet Earth all for a quick buck that won't follow you when you die? Why ruin the future generations chances of seeing the beauty of the world all because someone wanted to profit off the Earth? Please hear the pleas of the masses. The world is suffering. There is so much chaos that we cannot breath. Please, please, please listen.
