

Dex Zapien

I, much like most of the community, am strongly against the construction of data center infrastructure in Doña Ana county and the state of New Mexico as a whole. Short-term economic growth does not outweigh the long-term consequences of leasing our land and resources to the highest bidder while setting the wellbeing of the community aside. Our state needs to prioritize enriching the health of its communities and its residents instead of the economy and corporations. We as a people have been continuously disregarded and ignored throughout the history of this state and Project Jupiter is just the next way we are being poisoned for the sake of the powerful.
