

Crystal Almeida

As someone who has asthma, clean air is a strong priority for me. Everyone should have the right to unpolluted air. Project Jupiter does not align with these values. New Mexican citizens do not want their home to be a technical industries playground. It has been proven in many other states already that citizens do not need or want AI data centers to be built in their homelands. To build project Jupiter will be to go against the will of the people. This will be another example of wasted taxpayer money.
