

Eva Keltner

New Mexican habitat should be preserved. The data center is a threat to our bird population and other species special to New Mexico and Dona Ana county. Not to even mention the threat it had on our water, which is already being threatened by climate crisis. Propaganda about Project Jupiter data center should not be allowed, because it is deceiving to the public, offering jobs that are not guaranteed. We should be a state that leads the way in saying no to infrastructure that damages the land and the people that inhabit that land.
