To whom it may concern, I implore you to use proper judgment and consider the environment in the matter of project Jupiter. Our climate is in an extreme crisis, and all of our current issues are only going to grow exponentially with time. The planet is going to get warmer, and (very pressingly) we are going to have water scarcity issues. While AI is not the sole source of these issues, it is a contributing factor to the current climate crisis. AI is not essential to human life, it damages brain development, isolates people, and harms the environment. We must place regulation on AI and the construction of these large data centers which gobble up resources, raise electricity costs, and take away jobs from real, working Americans. The people do not want this.
