

Lasha Kirker

With the data centers, air quality will worsen and I don't want that. I want to be able to breath; I want future generations to have a good planet to live on and not suffer. We should be caring for and tending to Earth not exploiting her for profit, for money. We don't need "the cloud storage" — people have lived hundreds of years without and we can learn to live without it again. We are all already to addicted to our phones and computers, we don't need more data centers to keep us submitting to these robots. We are in the age of the rotors, we are already being controlled. By going forth with the data centers, with Project Jupiter, we continue this narrative— the narrative that will be the downfall of humans. The broader public does not want that, we just want connection with other humans in person; data centers is not the answer to that.

"The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually."
