

Ruby Denson

The proposed plant, if built, will release up to ten million tons of greenhouse gases within just a year. We only have one America, and one Earth, and as citizens it is our right to a healthy public land without projects like this steamrolling over all of the progress we have made towards bettering the climate over decades. This is a project that benefits the few at the cost of years of work and progress taken by millions all across the country and the world at large. Allowing it to move forward spits on the democracy we founded our country on. Granting this project a permit goes against the NMED's supposed mission to foster a healthy New Mexico for future generations is completely contradicted by the Yucca Growth Infrastructure's proposed project, which will be located within five miles of multiple school districts, and is being handled by a company with a documented legal history of mishandling toxic waste. I urge the NMED to outright reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid.
