

Inès UROZ

I don't want this project to occur at ALL. We already have enough problem with climate change, there's literally big fire because of heat, death of people without any AC, animals are dying too. We cannot accept this for our own survival ! The temperature was at 40°C in briad daylight in France, wich is NOT normal for this country. In the US big heat waves exist too, you can cook eggs outside, many people proved it in videos... It's going to kill nature, animal and even human...
