

## Andy Luna

I don't want Data Centers in my state. There have been numerous reports of other Data Centers causing issues for residents. Water contamination, electrical grid strain, and higher electric prices.

I don't care what the company interested in building the Data Center says; until higher standard regulations are introduced that force them to consider New Mexico's residents well-being, I don't want any Data Centers in New Mexico.

I oppose Project Jupiter receiving this permit.
