

Kashka Calvin

I'm riding to let you know I do not approve of project Jupiter in any way shape or form. New Mexico's air quality is already poor and we should be looking into ways to improve our quality of our air rather than permit another company to make it worse.

I have asthma and for 60% of the year I have to take breathing treatments with a nebulizer due to the air quality. New Mexico is already difficult to live in with the water restrictions and low air quality. We do not have enough resources to allow project Jupiter to be fulfilled.
