

Brookelyn Howard

Project Jupiter will not only affect water, climate, but our animals. It will lower their water supply, pollute the water, and severely affect the animals. Please, PLEASE think about what you're doing before you go through with this. Also, a data center uses entirely WAY too much water. Millions of gallons a day. This will cause surrounding civilians electricity bills to go up, not everyone can afford that. This will pollute their water, it will make their water visibly dirty while coming out of the faucet, if you don't believe me do your research. You're affecting the planet, we only get one planet. There is no planet B, we must take care of this one. We must take care of the animals, because believe it or not, we need them too. Please don't go through with this. Think about what it will do to the earth.
