

Emily Heiner

As a born-and-raised Las Cruces who has returned to live here as an adult, I am opposed to Project Jupiter. I am familiar with the environmental effects of data centers that have already been built around the world, and I don't have any reason to believe that Project Jupiter will be different. We need to prioritize our air quality and not add unnecessarily to our emissions and jeopardize community respiratory health for what will end up being only a small number of permanent jobs. Additionally, Project Jupiter threatens our local water supply, and will increase noise pollution. Please do not approve any further permits for Project Jupiter.
