

## April Porter

I write this great urgency and concern... Please do not grant an air quality permit to Project Jupiter now or ever! Shut down any possibility of having a data center in New Mexico. We just don't have the water, and we don't want the air and water pollution, we don't want Project Jupiter at all.

We are being sold a false and damaging bill of goods with this project. We have an abundance of sun and wind so why not create jobs in New Mexico in the clean energy sector? The full page ads by Yucca/Jupiter are misleading and try to tell a person thru not so subtle coercive language that if you support clean air and water, job creation and better schools, you support Jupiter. Not so and there is already historical proof of the damage data centers cause. ( ie., Arizona towns taps run dry due to data center built nearby). This is not "fake news", these are facts. We need to find another way. I will die trying to save New Mexico and our planet. Thanks for taking serious consideration before making a unwise and last poor decision.
