

Therese Thomas

I am a resident of Las Cruces and I am asking that you deny Yucca Growth Infrastructure's air quality permit. After the rejection of the previous air quality permit, a switch to Bloom fuel cell technology has been proposed, but according to one of Blooms' own representatives, whom I spoke with at the Project Jupiter Job Fair (which was disappointingly put in place of a real public hearing), the reduction in pollution will only be 21% over the rejected technology. It will still add 10 million tons of carbon dioxide pollution and a vague estimate of toxic emissions to our active and long-time nonattainment zone would be nothing short of blatant environmental racism. Our metro area is currently 16th worst in the nation for ozone pollution and we have received a failing grade on this air quality standard every single year since 2000. We are already breathing some of the most compromised air in the country. It is unacceptable to invite a new source of hyperscale air pollution into our communities. This is a particular insult to the Santa Teresa community which is still suffering the multi-generational impacts of the ASARCO plant! The carbon dioxide pollution alone will heat our atmosphere at a much faster pace and promote the formation of even more ground-level ozone. Fuel cells also create hazardous waste and the fuel cell provider for this project has a history of illegally dumping this waste and hiding it for several years. This company will likely repeat its bad habits, illegally dumping dangerous and undisclosed chemicals into our public landfills, and we will just have to wait until somebody notices? Our county has and continues to face an illegal dumping epidemic so how can I be sure that these systemic oversight failures we have locally won't continue and expand to include this dangerous and experimental fuel cell operation. A fine for illegal dumping does not undo damage or its spread once our aquifer and soils are contaminated. It also will not re-capture the volatile chemicals that are released into the air when hazardous waste is improperly stored and disposed of. Our health and safety are worth more than the profits of out-of-state corporations, particularly at a time when so many other protections at the Federal Level are being stripped away in the unprecedented power grab and giveaway to powerful corporations by our current US Administration. And this says nothing about the still largely secret intended use for the AI the proposed center would serve (military, population surveillance, and efforts at mass control?) Our health and precious natural resources are not worth making billionaires into trillionaires while the rest of us suffer under the iron heel. Elected 'Democratic' leaders should be ashamed of themselves for allowing money to corrupt the public's will and well-being, once again. And this time it's deadly serious. Take this opportunity to make things right and deny these permits. If further deliberation is needed (it shouldn't be), a public hearing in Santa Teresa is non-negotiable.
