

Mckenzie frakes

Whilst they claim they will not use 'drinkable water' they are taking directly from the community water line still impacting the community water line by taking 11 Million gallons. And the data center will still use 20,000 a day, claimed to be office usage, this amounts to 167,000 gallons a year. They also claim they will reduce green house gases by 30% but even with that will still dump out 10 Million tons of green house gas. These circumstances will largely affect the surrounding communities health, and create an almost unlivable environment. I am a Fourteen year old girl writing this to try and save my future. If more of these data-centers are built by time im about 25-30 our earth will be ruined and this is the only one we have, please reconsider building this and using my future for your paycheck.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
