

Amelia Leyva

We do not need this. We don't need ai because we have lived without it before and we were doing good. The rise of ai has destroyed many things like our planet and has made kids dumber because of how they use ai for all of their school work. AI can literally take us to our graves if we don't stop using it for any little thing. Ai is also taking away our arts since people are using it to make videos, music, drawings, and little short films, we should be able to create art and not be scared a robot will do better than us or take the job away from humans. Ai isn't something that we can't stop and just let it be because it's out there already, if we can all come together and agree to try take down ai we can do it because Ai isn't something we need to live but water is and so is air, and if our air is starting to get affected this will start to hurt more than just humans but all living things so we need to start protecting these thing and that data center is only going to destroy the plant and soon it's going to start affecting everyone.
