

Donna Sinn

No more infrastructure appropriations or approvals for any data center main or support infrastructure.

New Mexicans voices have not been heard or sought related to any data center projects that impact the quality and quantity of water, air pollution, noise pollution, temperature elevation due to extreme heat outputs from data centers.

The people of New Mexico's voices must be heard.

The Governor and various County Commissioners should have known better but never sought input from the public. Likely because they knew the public would not approve if the public was aware of the true impacts of data centers.
