

Aye Sundram

New Mexico needs its precious water for people, plants, and animals. Please deny any and all permits for this project and for any future data centers, AI projects/companies, large scale servers - any construction where the water use will go to machinery instead of people and food. No more pollution! Save our water. Our state will be uninhabitable if we allow outside companies to extract this scarce and precious resource at the expense of the lands and beings that live here.
