

Robert Leutheuser

By this communication I wish to register my strong recommendation to the NMED that it not approve Yucca Growth Infrastructures' Permit Application 10883 to provide power to Project Jupiter in Dona Ana County.

Yucca states that the plan outlined in this application, if implemented would annually generate about 10 million tons of greenhouse gasses per year, as compared to the 14 million tons per year projected in their first proposal. Yucca presents this as a 4 million ton benefit to the public. This is akin to a mobster saying that instead of killing 14 of your family members he will only kill 10, and you should be grateful! Let's tell him he won't kill any!

The voracious appetite of the likes of Oracle and OpenAI (Project Jupiter primary investors) building massive data centers, across New Mexico and the entire country, is growing in recognition of their pernicious negative impacts. Project Jupiter and Yucca is such a case.

Please do the right thing and deny this application.

Sincerely,

Robert Leutheuser
Santa Fe NM
