I am against Project Jupiter, as I believe it will not be beneficial for the future of current and next generations and would speed up global warming drastically. This planet is our only home, we have to take care of it, not ruin it. Next generations will not have a job or stable life if they don't have a safe and healthy world to be in. The plant is dangerous, this fuel cell gas plant will release toxic chemical pollutants and 10 million tons of carbon dioxide into our air. Developers did not propose pollution controls, they estimated the plant's pollution based on tests from a very small unit (only 65 kW) but the power plant they want to build is 37,000 times bigger. A 15% "safety margin" was added to the numbers. Safety margins are NOT usually added if a company is confident their pollution estimates are accurate. Project Jupiter's fuel cell plant will generate enormous amounts of hazardous waste containing: Cancer-causing chemicals (benzene) Heavy metals (lead, arsenic, chromium) Toxic compounds (sulfur and others) All of these poison the human body, our water, and our soil Bloom Energy has been fined a total of \$1.4 million dollars for illegally storing, transporting, and dumping this hazardous waste in several states AND falsifying records over many years to cover it up. Stop Project Jupiter, we cannot ruin the future of our children and our future by ruining the breathing air and environment.
