Please dont do this. I am from New York City, and like the developers of this project, i hold many points of privilege. Unlike others around the world, i am not as directly impacted by the negative effects developing AI has on the planet; however, that is not an excuse to not care. Its easy to brush aside issues like this when they dont impact you as much, but with economic and social privileges, comes a responsibility to help others who don't necessarily have these same privileges. This project will not only change the trajectory of our current planets health, but will negatively impact future generations to come. We only have one planet; we must value and respect her.
