

Ben Herrera

Such installments of data centers and other permits allowing the pollution in our state should not be allowed given the current state of global warming and the communal harming that data centers bring to the people around them. There is no need to harm the climate further especially with another data center to provide very few jobs for the surrounding area and make the communities near such data centers suffer. These data centers do not care about people and the climate that they are drastically hurting. Community leaders should do everything in their power to ensure such data centers are not built given the insane access of them that have already been built. People do not deserve to suffer for the profit of a large corporation!
