Dear NMED staff,

I live in Lagos, and I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County.

I am an architecture student who studies and has observed the changes of the earth's environment state due to the continuous destruction of natural habitats for the creation of centres and other facilities that are detrimental to health of those in near proximity and by extension the overall climate condition of the earth

The project's proposed fuel cell powered grid is concerning for many reasons:

- It would still produce a high level of greenhouse gas and toxic pollutants.
- This technology generates toxic waste, and the process for handling this waste is still unclear.
- Fuel cell technology or a centralized waste system has never been tried at this scale.
- Surrounding communities' air will be severely impacted by this development.

I urge the NMED to reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology and to give an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

Sincerely, ANONYMOUS
