

Duncan McGraw

I am writing to express my opposition to Project Jupiter for many reasons.

- The water required to cool the servers needs to be very pure, which is already in shortage here
- Heat pump cooling systems don't require water to operate
- The CO2 emissions are 10 million metric tons, surpassing Albuquerque, Santa Fe and Las Cruces combined
- AI steals from artists and creatives to produce content
- Doña Ana county already has problems with accessing drinking water and environmental pollution.

For these reasons, I cannot support this project.
