

lexus salazar

There is no need for Data centers. They only profit one group of people and that is the rich and wealthy. Since the Data center in Los Lunas opened for Meta, our water has become scarce. That is more than enough to deal with. I already do not want to live in an area with high tech cameras and speed traps every mile. I believe opening Data centers like this is an excuse for our privacy to be taken away, and mass surveillance on its citizens. There is NO BENEFITS to come with any new data centers being built. Thank you for reading my objection to this Data Center.
